BAY ST. LOUIS WILL HAVE WIRELESS STATION.

Will Be the Only One On Seacoast Between New Orleans and Mobile.—Hubert De Ben Will Construct Station.

Mr. Hubert E. De Ben, of 1044 City Park avenue, New Orleans, and a summer resident of Bay St. Louis, is preparing for the erection in Bay St. Louis of a wireless station.

To The Echo he said, "I will begin work on the station in about a month and should have it completed about next spring. I expect to be in Bay St. Louis shortly with the necessary testing apparatus so as to find a suitable location."

The station will have an approximate range of one thousand miles. Messages will be handled free of charge to any part of the United States via the American Radio Relay League trunk lines.

Bay St. Louis will have the distinction of being the only town between New Orleans and Mobile with such a wireless station.

Hubert E. de Ben is still called the leading wireless amateur of New Orleans, although he is now a commercial radio telegrapher. He has the best equipped and largest amateur radio station in the South, says the New Orleans Item, speaking about Mr. de Ben in a feature article of recent date, and continues:

About five years ago a friend asking him to assist in erecting a station. At that time "wireless" sounded like something mysterious and magical but having a "mystery solving mind" Hubert, who was then 15 years old, listened to the brief explanation of radio-telephony and before the station was erected he became as enthusiastic as his chum.

"Coming in contact with a radio 'fiend' lays one liable to the disease of radioitis," and I was in for an overdose," says de Ben.

HEARS HIS FIRST SIGNALS.

"After receiving the explanation of the mysteries of wireless, I returned home and began planning. I made a few vicious attacks on my savings account and bought material to construct a few pieces of crude apparatus. I erected a small aerial and connected it to the apparatus. I was with the receivers clamped to my cranium for two hours before being rewarded with faint sounds. They were being sent by the naval station four miles away. At last the mysterious world of wireless was mastered."

"Friends and neighbors visited me and listened with awe to the mysterious flashes and buzzes. They regarded me as a miracle man with more than human intelligence. There were some Bolshevik neighbors, too, who started rumors that the wireless was a device for communicating with the ghosts and lightning. These rumors were promptly stamped out. I claimed that persons with such ideas were ignorant and their wild fears unworthy of notice."

SIX MONTHS WORK WASTED.—"The government requires all amateurs to pass an examination before being allowed to transmit signals, and the amateur, being dissatisfied with only hearing them, began studying for the tests."

Alas! He studied the wrong code and when he appeared before the district radio inspector, his six months of labor had gone for naught. He must return and learn the International Morse or Continental code. Two months later he returned equipped with a knowledge of "Continental" and various points of the theory of radio electricity.

Having obtained his license, he installed a transmitter with a non-synchronous rotary gap. Such a gap sends out a series of sharp, crackling sounds like a freight train crashing down a hillside without stopping to begin to transmit signals. The nerve-racking noises disturbed the neighbors aroused to a high pitch of indignation they would arrest him for disturbing the peace, they would annihilate him, they would burn his shack.

For months the boy who mastered the secrets of mysterious radio feared to go forth from his home fearing to leave his operating room, sure destruction and death would greet him if he ventured into the streets and his neighbors would wreck his apparatus if left unguarded. Jealousy the boy watched his precious set, beset with these and a hundred other fears. But the noises of the rotary gap continued far into the night. In defiance of neighbors and his own fear, he continued to operate.

BUILDS NEW STATION AFTER WAR.

In six months having become proficient in many branches of the science, he took out a commercial license. The sea, with all its wonders appealed to his boyish nature. The commercial license entitled him to sea service. That summer he spent his vacation at sea. For four succeeding years, he has spent the summers on the sea and the winters in school.

Then the war came, and his older chums left for the front. The government ordered all amateur stations dismantled. And amateurs must not listen to War Department orders. Spies could not keep stations under the guise of amateurs. Hubert was too young to get into uniform with the Merchant Marine.

When the war ended and the government allowed amateurs to operate their stations again, Hubert erected a record-breaker. It was the most up-to-date high powered amateur station in the South. With it he could receive signals 1900 miles and transmit 1200 miles. It had a working range of 1000 miles. Direct communication with Roswell, New Mexico, Chicago, Norfolk and Washington was established. He communicated with stations in 20 states.

INTERRUPTED U. S. F. CO. SERVICE.—Just prior to the war, while Hubert had his first flush of enthusiasm, the high powered station of the Tropical Radio Telegraph Company was erected near City Park. This is the fastest station in the United States; it moves business with greater speed than any other. Operators at this station were forever being interrupted

with by the zealous amateur. Hubert would try to talk to whomever he

The big station was trying to communicate with Swan Island, far down in the Caribbean sea. The signals of the amateur continually interfered with those of the far away station. Wrathful radio men threatened him, cursed him, and complained to the district inspector about him but to no avail.

Be it said to Hubert's credit that he did not know the havoc he was causing with the business of the Tropical Company. So when the manager of the station, after locating him, gently explained, through clenched teeth, Hubert ceased to give them trouble. He afterwards became very friendly with the men at the big station.

Hubert de Ben is 20 years old. The five years he spent in the "game of wireless telegraphy" he regards as profitable. His ambition is to become a radio engineer.

Hubert says: "Amateur wireless is the only thing for wide awake boys. It affords an entertaining combination of pleasure, recreation and education. It offers recreation and education to the greatest number of people, and holds limitless possibilities for the future."

CRUISER "GRACE" WEATHERS THE STORM AT ANCHOR BEAUTIFULLY.

This cruiser "Grace" owned by Mr. John D. Graves, the celebrated marine lawyer, of New Orleans, a summer resident of Waveland, holds the distinction of being the only vessel that has ever held to her moorings at Waveland throughout any of the great hurricanes which have visited the Gulf Coast. She having just gone through the terrific hurricane out on the open gulf, which visited us during the present week, coming through it all without moving from her anchorage or sustaining the slightest damage. Because of the great number of vessels, including some of the largest that visit this coast, both power and sail vessels, that have been lost on this coast front during the different hurricanes which struck along here, it has settled the opinion of seafaring men that it was not possible to anchor a vessel along here and prevent her from dragging anchors and going to pieces on the beach.

The usual direction of the hurricane at the end of this week, is out of a south-easterly wind, which gives a direct on shore wind and sea at Waveland. But it is now manifest that if the method of anchoring pursued by Mr. Grace is followed, any vessel can get as good an anchorage off Waveland as exist along any other part of the Coast.

It will be remembered that during the great hurricane of 1909, the cruiser then owned by Mr. Grace was anchored in Bay St. Louis and was damaged. The vessel along the fire coast which proved that it, too, came through without sustaining a particle of damage, although a great number of crafts, of all kinds, anchored within the vicinity of Mr. Grace's cruiser, were destroyed.

Mr. Grace and his family will shortly return to New Orleans on their justly distinguished cruiser, which by the way, is the fastest vessel on the coast.

DEATH OF B. F. COPELAND.

Former Newspaper Man Prominently Connected With the Paper and Printing Industry Passed Away Sunday A. M.

Mr. B. F. Copeland died at his residence, Second street (the Gagnon place), Sunday, September 20, at 10 o'clock, after an illness of Bright's disease extending over a period of quite a while.

Mr. Copeland and his wife having resided here formerly, came out from New Orleans during the early summer in the interest of his health. The change was quite favorable to his condition—thanks to Bay St. Louis and its physicians—and improvements set in steadily until September 1st, when he reported ready to return to work with his firm, E. C. Palmer & Co. of New Orleans, wholesale paper house and dealers in printers' materials. At his malady was an incurable one, the improvement proved only temporary, and his condition took a sudden change for the worse until Sunday when he passed away peacefully, as one falling into sleep.

The remains were shipped to New Orleans that night and Monday morning continued on its journey to Marion, Illinois. Here the funeral took place Tuesday, under the auspices of the Masonic and Elks bodies, the remains interred in the cemetery of his father and mother, in keeping with an expressed wish of the deceased.

Mr. Copeland was 53 years of age, a native of Marion, Ills. Here his father was known for years as the local publisher and was succeeded by the son. Later the son became traveling representative for the American Type Foundry Co., of St. Louis, with which firm his services were highly valued and he was personally held in great esteem. Ten years ago his family came South and for a while resided in Bay St. Louis.

He is survived by his widow and one son, a daughter-in-law and little grand daughter, all of whom, accompanied by a cousin, Mr. Elmer Copeland, who was here on a visit at the time from Marion, Ills., traveled with the body to its resting place.

Mrs. Copeland was a niece of a gentleman. A man of unusual intelligence and a most charming companion, and one who never knowingly would have uttered or written an unkind word of friend or foe alike. The kind word of friend and foe alike, the writer valued his friendship and his demise is chronicled with genuine regret.

FOR SALE: The Service Garage, located opposite the Echo Bldg. A good, paying business offered at attractive price; special inducement to the right party. Owner has other business and cannot give the proper time and attention.

REDUCTION IN PRICES OF FORD PRODUCTS:

The War Is Over and War Prices Must Go.

EFFECTIVE AT ONCE FORD CARS, TRUCKS AND TRACTORS WILL BE SOLD F. O. B. DETROIT THE FOLLOWING PRICES:

Touring, Regular,	=	\$440.00
Touring, Starter,	=	510.00
Runabout, Regular,	=	495.00
Chassis,	=	360.00
Runabout, Starter,	=	465.00
Coupe with Starter, Demountable Rim	=	\$745.00
Sedan " " "	=	745.00
Truck with Pneumatic Tires	=	545.00
Tractor	=	790.00

The Ford Motor Co. makes this reduction in the face of the fact that they have on hand immediate orders for 146,065 cars and tractors.

The company will suffer a temporary loss while using up the material bought at high prices. They are willing to make the sacrifice in order to bring business back to a going condition as quickly as possible and maintain the momentum of the buying power of the country.

Henry Ford says "The war is over and it is time war prices were over. There is no sense or wisdom in trying to maintain an artificial standard of value. For the best interest of all it is time a real practical effort was made to bring the business of the country down to pre-war standards."

ESCAPED AN OPERATION

By Taking Lydia E. Pinkham's Vegetable Compound Many Such Cases.

Cairo, Ill. "Sometime ago I got so bad with female trouble that I thought I would have to be operated on. I had a bad displacement. My right side would pain me and I was so nervous I could not hold a glass of water. Many times I would have to stop my work and sit down or I would fall on the floor in a faint. I consulted several doctors and every one told me the same but I kept fighting to keep from having the operation. I had read so many times of Lydia E. Pinkham's Vegetable Compound and it helped my sister so I began taking it. I have never felt better than I have since then and I keep house and am able to do all my work. "The Vegetable Compound is certainly a grand medicine." Mrs. J. R. Matthews, 3311 Sycamore Street, Cairo, Ill.

Of course there are many serious cases that only a surgical operation will relieve. We freely acknowledge this, but the above letter, and many others like it, amply prove that many operations recommended when medicine in many cases is all that is needed.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass.

FARM ANIMALS

SIMPLE FORM OF ORGANIZING

No Capital is Required, Farmers of Community Meeting and Selecting Officers.

The simple form of organization that suffices for co-operative live-stock shipping associations is one of their leading features. In the first place, practically no capital is required, since payment is not made to members for stock shipped until the returns are received from the market. To organize, it is necessary only that the farmers of a community meet together, adopt a simple constitution and by-laws, and elect officers and a board of directors, who in turn appoint a manager.

Although in order to transact business it is not necessary for an association of this nature to incorporate under the state laws, it is advisable to do so as a protection to the members. If not incorporated, the organization, as such, can not sue or be sued, and in case of the loss of stock from railroad wrecks or other cause the manager could not enforce claims for the association, but each shipper would be compelled to present claims for his own losses. The cost of incorporating is comparatively small—usually not more than \$10.

The United States department of agriculture will furnish, on request, the essentials of a model constitution and by-laws.

ENTIRE ABSENCE OF SCRUBS

Ohio Breeder, Recently Enrolled for "Better Sires" Keeps Nothing But Purebreds.

With the gradually increasing enrollment in the "Better Sires" movement, the United States department of agriculture notes unusual interest in registration of sires. Many enrollment blanks on which breeding stock is reported contain the name and registry number of stock, although such information is not specifically asked for. A recent enrollment from a live stock

An Ohio Purebred Shorthorn Bull.

owner in Athens county, Ohio, shows that all his sires—a Shorthorn bull, a Berkshire boar, and a Delaware ram—were registered stock of good quality. In addition he kept a registered collie dog. Furthermore, his Rhode Island Red poultry were all standard-bred. The result of using purebred sires is shown by the entire absence of scrubs on the farm. All the female animals listed were grades, cross breeds or pure breeds.

FORAGE SUPERIOR FOR HOGS

Extremely High Prices Make It Profitable to Substitute Grass Crops for Grain.

With the present extremely high prices of grain it is profitable to substitute, as far as possible, forage crops for grain feeds. A saving of 15 to 25 per cent of the total amount of grain and supplements may be expected through the use of forage. Pasture crops, when combined with grain feeds, will produce the cheapest rations for both breeding and fattening hogs, and the cost of gains will range from one-sixth to one-fourth cheaper than when the grain is fed in a dry lot.

It may be possible, in some cases, with an abundance of good forage, to obtain fairly satisfactory gains for a time on such forage alone, but the greatest returns have been obtained when grain was fed in addition to the forage at the rate of two to three per cent of the weight of the hogs per day.

SILAGE LACKING IN PROTEIN

When Fed Without Some Supplement, Many Feed Less Satisfactory Results Are Obtained.

Silage is lacking in protein and should be supplemented by some concentrate high in protein. When fed without this supplementary feed, less satisfactory results can be expected than when it is properly supplemented. The most economical and most satisfactory proportion in which to feed cottonseed meal to fattening cattle receiving silage is approximately 2.2 pounds daily a thousand pounds of live weight.

Market for Fat Steers

In the ordinary year, well-finished steers sell at the highest price in October. The market for really fat cattle generally continues good during November and through the holidays, but rapidly declines in January.

The Boar Head

It has many times been said that the boar was half the head, but which

Uncle Sam—Scientific Baker

By ROBERT H. MOULTON.

THE United States department of agriculture is charged with the promoting agriculture in its broadest sense. Hence the department contains many bureaus. The office of farm management, for instance, has for its main object the improvement of farm practice by introducing better business methods and by applying the principles of science.

Then there are the weather bureau, the bureau of animal industry and plant industry, the forest service, the bureau of soils, entomology, biological survey, crop estimates and so on.

Among these are the bureau of chemistry and the bureau of entomology. The former is largely concerned with analytical work and investigation under the food and drugs act and questions of agricultural chemistry of public interest. The bureau of markets has a wide scope. Its work is divided into four branches—investigational, demonstrational, service and regulating. One branch of its investigational work is the securing of basic information of fundamental importance regarding marketing methods and conditions and also regarding the standardization of agricultural products and methods used in their handling.

So many of the activities of the department revolve about the grain that the United States produces and eats. The specific activity with which this article is concerned is "the milling and baking qualities of grain for which standards have been established under the United States grain standards act."

Scientific milling and baking have received the attention of a corps of investigators. An experimental mill and baking laboratory have recently been installed at a cost of \$50,000. They are quite up-to-date and by means of them a large amount of accurate information, hitherto unobtainable, has been secured.

The laboratory is really a series of laboratories, each equipped for doing a particular part of the investigational work. The wheat samples obtained for testing purposes first pass through the grading laboratory, where a complete mechanical analysis is made of each sample and a detailed record kept of its condition, physical characteristics, purity and soundness. This feature of the investigation is not the least important, as it is through the observations in this room that these investigations can be definitely connected with practical grain grading and wheat valuation.

After this operation is completed the samples pass into the hands of the miller, who puts them through the cleaning machinery, where they are handled in practically the same manner as in the commercial mill cleaning department. The equipment here, consists of two grain separators and a sifter. Once cleaned, the sample is ready for tempering.

Every type and condition of wheat grown in the country is met with in the course of the work of this laboratory, and owing to the fact that the

treatment required for the different samples varies considerably, depending upon its physical character, the judgment of the miller must be assisted by definite information concerning the sample. In this he has before him the record obtained in the grading laboratory, which includes the very necessary data regarding the moisture content. As comparatively small quantities are used in the milling tests, the addition of moisture and the control of all conditions surrounding this process are relatively simple.

The milling is done on a small non-automatic testing mill consisting of four single stands of six by six inch rolls, three corrugated and one smooth. The mill is so operated that the flow of a five-break nine-reduction roller mill, such as is in commercial use, can be closely imitated.

Every effort is made to standardize the conditions under which the tests are made, in order that the results secured may be comparable in all cases.

One innovation in this connection, which is considered of extreme importance, is apparatus for controlling the humidity of the milling room. This has proved to be a very valuable adjunct, and is a distinctly new feature as applied to work of this character.

After a short period in storage the flour produced in the mill goes to the bakery, where its actual quality is determined by its conversion into bread under standardized conditions.

This bakery is very completely equipped for accurately controlled work. Dough-mixing machines; an

electrically heated fermentation cabinet in which the heating is automatically controlled, and an electric baking oven constitute the main equipment used by the baker in producing his numerous miniature loaves of bread. Once baked, the expansion of the loaf and the texture, color and flavor of the bread are determined and recorded.

Other tests of technical nature, such as will show gluten, protein and moisture content, are made on the flour, to assist in determining its commercial value and interpreting the results of the baking tests. Much of this work is done in a well-equipped laboratory adjoining the bakery. In addition to the unsurpassed facilities of the bureau of chemistry are also available in the conduct of investigations that lead into the field of chemical research.

The immediate direction of the work of the laboratory is under the chief of the bureau of markets, and the present time relate primarily to the many factors that must be considered in the proper revision and intelligent application of the federal wheat standards; however, the facilities offered by this specialized equipment and corps of workers are also available to other bureaus of the department.

Numerous milling and baking tests are made for the bureau of plant industry to assist in their efforts to develop for the various sections of the country more prolific strains of wheat, having superior milling and baking qualities.

GATHERED FACTS

Some of the caterpillars found in the region of the Darling river in Australia are more than six inches in length.

In only a few cities of western Siberia are there two-story houses. Baths in houses are very rare, public baths being used.

Great interest in American ready-built houses has been expressed in both France and England, according to John R. Walker, lumber trade commissioner.

Hannah Montague, wife of a blacksmith, made the first detached linen collar for men in Troy, N. Y., in 1819. Now in one dollar factory in that city 200,000 yards of linen is used daily.

An English fire department is testing a new fire escape by which persons are lowered in a basket from a tower raised against a building instead of being carried down ladders.

The shah of Persia possesses perhaps the most valuable pipe in the world. It is the Persian official pipe, and is smoked only on state occasions. It is set with rubies and diamonds, and is valued at \$500,000. Matches are turned out in huge quantities by machinery. The machines now in use cut up great planks of wood into match splinters at lightning speed. The ends of the splinters are then passed through a paraffin bath and receive their heads.

An Argentine physician treats whooping cough by injections of an extract brewed from the patient's sputum.

In 1790 only 28,000,000 pounds of tobacco were sold in the United States. Last year the sales reached 914,000,000 pounds.

Time equivalent to 3,000,000 days is said to have been stayed to the women of the United States by the electric washing machines sold last year.

Fifty thousand Indians from all parts of Mexico recently completed their week of homage to their patron saint, the Virgin of Guadalupe, and their pilgrimage to the shrine of the virgin.

The Mennonites derive their name from Menno Simons, formerly a Catholic priest, who became a teacher and leader of the Anabaptists about 1537, and published his "True Christian Belief" in 1556.

A daily newspaper in St. Petersburg, Fla., gives away its whole edition every day the sun doesn't shine and in nine years and six months there have been only fifty-six free issues of the paper.

Resemblance

"Owens is a sort of human dynamo." "That fellow? Why, he hasn't energy enough to work and pay his bills."

"Exactly. Everything he has on is charged." Boston Transcript.

First Thing on Program

Mr. Gottrocks (at self-important pace for the cup that he hoped to be allowed to substitute a piece of plate, which, appropriately enough, was won in the following year by Lord Albatross, so named in honor

"RESULTS MORE THAN CLAIMED"

See Testimony Mr. J. F. ARENDT, Box 44, Houston, Texas.

PE-RU-NA

THE REMEDY FOR EVERYDAY ILLS

"I have used Pe-ru-na for years in cases of colds and catarrh. The results have been good in fact more than you claimed. Have also taken Lactopia and can easily say it is one of the best blood purifiers I have ever used."

Mr. J. F. Arendt

For Catarrh and Catarrhal Conditions

The evidence of one man like Mr. Arendt is more convincing proof to you of the merits of Pe-ru-na than any written words of ours. For fifty years Pe-ru-na has been the standby of the American family for diseases due to catarrhal inflammation of the mucous membranes lining the organs of the body. Thousands, like Mr. Arendt, have proved the effectiveness of Pe-ru-na for coughs, colds, nasal catarrh, stomach, bowel and liver disorders or any disease characterized by a catarrhal condition. If you suffer it is the result of a catarrhal disorder try Pe-ru-na. It is a true, tried medicine.

Sold Everywhere Tablets or Liquid
Ninety-seven per cent. of the people have catarrh in some form.

Plain Talk

"Pa, what is a dirigible?"
"Now, Willie, haven't I told you not to irritate your poor pa with your questions and persecute him with your propositions just like he was a cyclorama of inflammation?"

SAY "DIAMOND DYES"

Don't streak or ruin your material in a poor dye. Insist on "Diamond Dyes." Easy directions in package.

"CORN"

Lift Right Off Without Pain

Doesn't hurt a bit! Drop a little "Freezone" on an aching corn. Instantly that corn stops hurting. Then shortly you lift it right off with fingers. Truly! Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the calluses, without soreness or irritation.

Problem Put Up to Private Kelly Was Something Over Which He Had Been Pondering.

Kelly had drawn a summary for being absent from post while on guard duty.

"Where were you?" demanded the judge advocate, "when the sergeant of the guard passed just in front of your post?"

"At the rear."

"Where were you when the corporal passed just behind it?"

"And now," triumphantly, "where were you when the sergeant and the corporal walked around your post from opposite directions without seeing you?"

"Judge," said Kelly hopefully, "that's been worrying me. Where was I?"

"The American Legion Weekly."

The Basement Was Vacant.

"You say," remarked a Brooklyn woman to a candidate for a job in her household, "that you were a month in your last place?"

"Yes, mum," was the response. "A week with the lady on the top floor, a week with the lady on the third floor, a week on the second and a week on the ground floor."

Good Intentions.

"Did you ever fool with the stock market?"

"No, I was in earnest. The stock market did the fooling."

SAW SOLDIERS OF FIVE WARS

John Pemberton Oak Has History Probably Unequaled by That of Any Other Tree.

Soldiers of five wars have been driven beneath the John Pemberton oak tree, Bristol, Virginia-Tennessee, dominated for a place in the hall of fame of the American forestry association at Washington by Mrs. H. F. Lewis, secretary of Virginia for the Daughters of the American Revolution. Under that tree Col. John Pemberton mustered his troops for the battle of King's Mountain.

A marker has been placed on the tree by the Sycamore Shoals chapter, says the American Forestry Magazine, in making the announcement. The soldiers of the War of 1812 met here. Then came the Mexican war and the old tree saw men again leave their homes to fight. Next came the struggle between the states, and the oak witnessed the drilling of men to fight one another in their own country. Then came the world war and again the veteran oak saw our boys answer their united country's call.

Good Advice.

"What would you do if you were in my shoes, Jephson?" asked Hobbs.

"Have 'em cleaned," replied Jephson.

Any way is good that brings the desired results, and had that is ineffective.

**INVENTIVE GENIUS
ROBS CALOMEL OF
NAUSEA AND DANGER**

Doctors' Favorite Medicine Now Purified and Refined from All Objectionable Effects. "Calomel" is the New Name.

What will human ingenuity do next? Smokeless powder, wireless telegraphy, horseless carriages, colorless iodine, tasteless quinine—now comes nauseless calomel. The new improvement called "Calomel" is now on sale at druggists. For biliousness, constipation and indigestion the new calomel tablet is a practically perfect remedy, as evidenced by the fact that the manufacturers have authorized all druggists to refund the price if the customer is not "perfectly delighted" with Calomel. One tablet at bedtime with a swallow of water—that's all. No nausea, no griping, no salts. By morning your liver is thoroughly cleansed and you are feeling fine, with a hearty appetite. Eat what you please—no danger—so about your business. Calomels are not sold in bulk. Get an original package, sealed. Price, thirty cents—(adv.).

DAIRY FACTS

CAREFUL HANDLING OF MILK

All Vessels Should Be Freshly Scalded to Remove Bacteria—Cover Will Exclude Odors.

No matter how well milk has been handled up to the time it is delivered to the consumer, it cannot be expected to keep well if it is carelessly treated thereafter. It should be poured into pitcher, pan, or other vessel—freshly scalded to remove any bacteria or mold spores—and kept in a cool, clean place free from dirt, flies, etc. New milk should never be mixed with old, unless it is used at once, as the bacteria in the old milk will, of course be added also, and the mixed milk will not keep as well as the fresh milk alone.

Bacteria are thickest where there is dirt and decay, and milk should therefore be stored only in clean, sweet places. It is safer to keep it covered, to exclude not only dirt and bacteria but also the flavors and odors which it so easily absorbs. If kept at a temperature of 50 degrees Fahrenheit, or less, good milk should remain sweet for 12 hours at least, after it reaches the consumer, and ordinarily for 24 hours or more, dairy specialists of the United States Department of Agriculture say. Sometimes in very hot weather housekeepers complain that in spite of all precautions it sours quickly, even in the ice box. This is often due to the fact that the air of the ice box, although it seems cold in contrast with the heat outside, is really not cold enough to check the growth of the bacteria; if a thermometer placed inside registers more than 60 degrees Fahrenheit, the fault is almost surely in the temperature of the ice box, and not in the milk.

In large cities, where most of the milk comes by morning trains from a considerable distance, it is often in

Sterilization is the Efficient Method of Preparing Milk Cans for the Reception of Sanitary Milk.

possible to deliver fresh morning's milk in time for breakfast, and that milked the morning before must be given to patrons who insist on an early delivery. They would get their milk from 12 to 18 hours fresher if they would take it in the afternoon instead.

AIR-TIGHT WALL IS NEEDED

In Building a Silo Protection Must Be Provided for Silage to Prevent Molding.

It makes little difference what material is used in building a silo as long as the silo is practically air tight all around the walls and bottom. Wood, cement, tile, iron, and plaster silos have been used with success. Protection against mold is largely dependent upon the exclusion of air, and for this purpose an air-tight wall is required, and the ensiled material should be properly packed in the silo. Silage will keep equally well in any one of the silos mentioned provided the walls are properly made, are air and moisture-tight, and the material is correctly ensiled.

REINFORCING INSIDE OF SILO

Where High Winds Prevail It Is Good Insurance to Place Wood Hoops at Top and Bottom.

Where high winds prevail it is good insurance to reinforce the inside of a silo with wood hoops at the top and bottom. Bricks, or thin, narrow lumber, usually 3/4 inch thick, are nailed to the staves so as to form a hoop of 4 to 5 thicknesses of the weather-boarding, care being exercised to break joints. The staves are 8x10 feet long and they may be soaked in water so as to bend easier.

CAPACITY OF COW'S STOMACH

Not Enough Nutrition in Pasture Grass to Make Maximum Production of Milk.

The bulky nature of pasture grass places a positive limit upon the capacity of the cow to make feed. In other words, the cow's stomach cannot contain grass enough to supply the required nutrients for maximum milk production; therefore a part of the ration should be of a more concentrated nature. Good pasture contains an abundant supply of succulent palatable and nutritious grasses.

Care of Milking Machine.
Milking machines need special summer care. Immediately after milking, water should be drawn through the last hose and under by operating the machine as at actually milking.

Antiquated Methods.
Yesterday's methods won't do for today. Keep up to date in your methods.

Lacquered Ribbons.
Lacquered ribbons and braids are appearing on many new models for fall.

Organdie Combination.
Gray dotted Swiss and white organdie are charmingly combined for a little frock with a very full circular skirt.

NOW FAD FOR PLAITED SKIRTS

THERE is so much to be said of separate skirts because there are so many of them. The separate skirt—more or less dressy—to be worn with blouses and smocks that correspond with it in character, has won the steadfast allegiance of American women and is taken as a matter of course in every wardrobe, just as tailored suits and blouses are. Together with tailored, one-piece dresses, it gives opportunity for varying our everyday clothes for morning or street wear, and it is the cornerstone of sports apparel. In the richer fabrics, for afternoon and dinner dress, it is the complement of many beautiful blouses and smocks. It is a great convenience to take one skirt with several blouses and ring many changes in the toilette.

A fad for plaited skirts just now has proved an inspiration to designers. They seem to delight in ingenious management of striped or plaid fabrics that can be made to do all sorts of unlooked-for things in conjunction with plaits. Both wool and silk fabrics are to be reckoned with in the fall styles, and all sorts of plaitings. A new fall model in striped woolen goods has recently made its debut and is shown in the picture above. Many ready-made skirts employ accordion plaits, that are liked because they take less material than other plaits and prove as effective as may be gathered from the model in the picture. The plaited skirt is easy to make at home. One has only to buy material twice the length of the skirt plus the width of the hem, with sometimes a little additional allowance for matching the stripes or plaids. The goods is cut in two lengths, sewed up and the hem put in. Then it is taken to the professional to plait in a plaiting machine, or one can do this work at home. The plaits must be very thoroughly pressed down.

When stripes running on the diagonal are wanted, the making is less simple, but even then presents no very great difficulties.

Ready for the School Bell

THE sensible mother does not worry when the time comes to outfit her daughters, big and little, for school days. She knows that she cannot go wrong when midday houses are determined upon for school wear. They have made an unassailable place for themselves in the minds of those who shape the destinies of the best schools and many of these schools require a midday suit for the everyday wear of their pupils and admit no exception to this rule. Uniform dress for school wear is so good an idea that it ought to spread and it is possible that some day it will be feasible for certain public schools. Mothers, carry further: If they will. The successful midday is not quite so simple a proposition to deal with as it looks to be. Its straight lines must be trim lines, its collar well adjusted, its shoulder sharply, its sleeve roomy and neat, its finish above reproach. The midday in the school suit shown above qualifies as a first class example, when put to these tests. It is a trim garment with round-tailored collar, a little vestee, a tie and sleeves that belongs to the United States navy and handsome insignia. There is a convenient and inconspicuous pocket on the left side and a tight cuff finishing a roomy sleeve. Rows of white braid, arranged in a decorative to collar and sleeves, the tie is knotted in the approved fashion and spreads its crisp ends as it should.

Plaited skirts appear to have passed into the realm of forgotten things, in plain materials, and plaits reign in their stead. Double-box plaits make straight up-and-down lines in the skirt of the midday suit. We have to concede that they are just the thing for it. For these suits it is worth while to use good materials—French and storm serge, gaberdine, jean and other durable fabrics of medium weight. For older girls the length of the midday and its top lines need consideration. These are to be snug. Skirts are usually side plaited.

Julia Bottomley

Flowered Taffeta.
A new blouse from Paris is made of flowered taffeta. It has a little modest piece of white organdie and an immense butterfly dash of self material.

Embroidered Hat Bands.
Embroidered hat bands are a summer novelty.

MOTHER!

"California Syrup of Figs"
Child's Best Laxative

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless physic for the little stomach, liver and bowels. Children love its fruity taste. Full directions on each bottle. You must say "California"—Adv.

The largest part of some people is their wishbone.

"Etonic—Worth Its Weight in Gold"

Writes Mrs. E. L. Griffin from her home in Franklin, N. H.: "I feel like a new person. Stomach feels fine after eating—all from taking your wonderful Etonic. It's worth its weight in gold."

Millions of sufferers from sour, acid, gassy stomachs, heartburn, indigestion, bloating, full feeling after eating, should try Etonic. Just try it—that's all, and get relief, new life, strength and pep. It produces quick, sure and safe results, because Etonic takes up the harmful acids and poisons and carries them right out of the body. Of course, when the cause is removed, the sufferer gets well—quick!

The cost is a trifle. Your druggist will supply Etonic, so, if you want better health, all you need do is—try it TODAY. You will surely feel big benefits at once. Adv.

Humility is the foundation of all virtue.

DODSON WARNS CALOMEL USERS

You Cannot Grip, Sicken, or Salivate Yourself If You Take "Dodson's Liver Tone" Instead

Calomel salivates! It's mercury. Calomel acts like dynamite on a sluggish liver. When calomel comes into contact with sour bile it crashes into it, causing cramping and nausea. If you feel bilious, headachy, constipated and all knocked out, just go to your druggist and get a bottle of Dodson's Liver Tone for a few cents. It is harmless vegetable substitute for dangerous calomel. Take a spoonful and if it doesn't start your liver and straighten you up better and quicker than nasty calomel and without making you sick, you just go back and get your money. If you take calomel today you'll be sick and nauseated tomorrow; but if you take Dodson's Liver Tone you will wake up feeling great, full of ambition, and ready for work or play. It's harmless, pleasant and safe to give to children; they like it—Adv.

Felt Fagged Out

South Carolina Man Says Ziron Helped Make Him Feel Stronger.—"A Good Builder."

"I HAVE been taking Ziron and found it to be a splendid tonic, a good builder, and a help to me." Says Mr. D. B. Brunson, of New Brookland, S. C.: "Mr. Brunson explains that he was in a run-down condition, 'fagged out' when I would get up in the mornings, he says, 'I would be so tired, and felt fagged out. I had indigestion, also.' 'I decided to use Ziron and see what it would do. I found it just as recommended. It made me feel stronger, and did away with the tired feeling.' 'ZIRON, of which Mr. Brunson speaks, is a scientific compound, prepared from pure, soluble iron salts, with other tonic ingredients, forming a valuable, building medicine for pale, weak people. Ziron helps to enrich the blood with iron and tone up the general system. Many people have been benefited by taking Ziron. Why not try it and see what it will do for you? It may help you. If it doesn't, take the empty bottle back to the druggist's, where you bought the Ziron, and get your money back. This offer applies to the first bottle of Ziron that you take, and is good at any drug store. Insist on Ziron. Accept no substitute."

WINTERSMITH'S CHILL TONIC

Sea Coast Echo.

CHAS. G. MOREAU, Editor and Pub.
Official Journal of Hancock County, Miss.
Official Journal of City of Bay St. Louis.

CITY ECHOES.

—Mr. W. C. Moore and Mr. L. H. Smith, representing the occasional Board of District No. 6, have been here for several days, working with Mrs. M. C. Gager, executive secretary, Home Service Section, A. R. C., on cases for vocational training for disabled ex-service men. Mr. Moore will remain over for several days more, Mr. Smith having left for Natchez, Miss.

—Mrs. G. E. Temple, accompanied by Mrs. A. Thery, left Saturday for Brown's Wells, Miss., where they will spend a while in recreation, and before returning home will visit other points in the State. The ladies intend to be gone for an indefinite period.

—The Parent-Teacher's Club of the Central School held a very interesting and profitable meeting at the school house Monday afternoon. Mrs. J. J. Arret was made chairman of the committee to get up a musical and variety program for the next social meeting of the club, to be held at the school house at night. The entertainment will be given by the grown-up talent of the community, no children taking part.

—Have your house wired. Enjoy better light at low cost. Use an electric fan, a vacuum cleaner, and other conveniences. We will be glad to furnish you a free cost estimate whether or not you decide to let us do the work. Mr. J. Thornton, Electrical Contractor, Hanson Bldg., Davis Ave., Natchez, Miss.

—The Echo has been requested to announce that there will be a "penny party" given on the evening of September 30th, on the lawn of the W. Alex. residence, on the beach front, benefit of the Catholic church. The affair is to be given by a band of eight little girls, who are interesting themselves in the interest of the cause. May every success possible attend their efforts.

—Mr. and Mrs. R. W. Taylor and little sons, after visiting their relatives, Mr. and Mrs. P. J. McGinn, this summer, left for Atlanta, Ga., Sunday night, where they will reside in future. Mr. Taylor and brother have become associated in organizing and managing one of the largest automobile corporations in the country. Mr. Taylor and family are registered at one of the leading hotels of that city.

—The Echo has been requested to announce that there will be a special meeting held on next Tuesday afternoon, September 25th, at 2:30 o'clock, Central School, of the meeting of the Parent and Teacher's Club. Object of the meeting to discuss matters pertaining to the Hancock County Fair October 7th and 8th. Full attendance is urged. This is a special meeting and your presence is specially requested.

—Scratch My Back!

—The Gulfport and Mississippi Coast Traction Company is the greatest sufferer along the Coast from both tide and winds, over one-tenth of its roadbed and tracks washed away between Biloxi and Gulfport. The company also suffered from the loss of trolley wires and numerous poles which were imbedded across its tracks, making travel along the beach roadway somewhat dangerous. Between the two cities there were five serious washouts which will require large forces of men approximately two weeks to repair.

—The storm damages to Bay St. Louis are comparatively small but numerous and the aggregate is considerable. The municipality proper was possibly hit the hardest, the roadway at both extreme ends of the city being washed away. Waveland's roadway in the vicinity of Coleman avenue and further down suffered serious damage that seems irreparable. At this rate in due time the Waveland beach front road will have been obliterated for the major portion at least.

—At a meeting of the Sea Wall Bond Commissioners of the City of Bay St. Louis, called at the instance of Mayor R. W. Webb, held Tuesday night, it was decided to continue the building of the sea wall. The safety of the people and the protection of property is at stake and regardless of the high cost of material and labor it was concluded to go ahead and finish the splendid work begun. It is a wise decision and the commissioners will receive the plaudits of every right-thinking citizen and property-holder.

—Scratch My Back!

—Due to the lack of a sea wall, Harrison county coast line suffered much damage from the storm. The sloping beach there does not prove adequate protection. In the destruction of the hard surfaced roadways both in Biloxi Mississippi City and Gulfport. In Biloxi several hundred feet of the Waveland beach front road was damaged for the first time since its construction. In Mississippi City in front of the Piaggio home the entire road was carried away for a distance of several feet by the tide. The newly constructed roadway on East Beach in Gulfport was damaged to the extent of approximately \$5,000, a lot of which will require considerable county some time in making repairs.

—Mr. Joyner, of the firm of Kergosien & Joyner, is receiving the congratulations of his friends this week on the occasion of the arrival of a son at the family home in Union street. This is the first-born in the family, and the event carries much joy with it. Both mother and child are doing exceptionally well.

—The rally for St. Paul M. E. Church, colored, in Goodchildren street, was a success more than in the ordinary sense of the term. Mrs. C. E. Powell, one of the captains went "over the top." Total amount raised in this special effort for the new church which the congregation proposes building, was one thousand and thirty-six dollars. The resident bishop, Rev. R. E. Jones, was present at this rally and presented the trustees with a check of \$1,000.00, giving the fund in the bank for the new church, \$2,500. This is a splendid showing, and is worthy of mention. The church is to be built on a different site from where the present one stands, and will cost \$16,000.00. The difference in the amount on hand and that needed to be supplied from the fund of outside church extension work, Bay St. Louis will naturally feel proud of the new church building.

—A. H. Latham is visiting at the home of Mr. and Mrs. J. J. Arret.

TIMELY COMMUNICATION FROM "A TAX-PAYER."

Dwells on Narrow Escape Bay St. Louis Experienced This Week in Absence of Sea Wall—Wants Bond Commissioners to "Get Busy."

My dear Mr. Editor:—

When I stop and wonder what this little storm that has just left us might have been we have a great deal to be thankful for.

None of us knew when we went to bed on Monday night whether we would wake up and find that part of Bay St. Louis not protected by the sea wall gone. I mean the subjects of Bay St. Louis.

We had a wonderful summer. No rooms or house that could be occupied not filled to full capacity. It was not a question of would you rent, but what would you take. One bidding against the other for the opportunity to rent. This winter, from present indications, will be as good for Bay St. Louis as the summer if present indications continue.

Can we hope for this condition if our front roads are wiped off the face of the map? Can we hope for Bay St. Louis as we saw it this summer if our houses or bluffs and our roads on sand and a ladder needed get from the road to the houses?

Had Monday's storm hit us with its full force don't you believe that we would have expected to see that part of Bay St. Louis as we saw it this summer if our houses or bluffs and our roads on sand and a ladder needed get from the road to the houses?

Had Monday's storm hit us with its full force don't you believe that we would have expected to see that part of Bay St. Louis as we saw it this summer if our houses or bluffs and our roads on sand and a ladder needed get from the road to the houses?

SECOND LARGEST CIRCUS IN THE WORLD TO VISIT COAST.

Sells-Floto Show Will Be Gulfport Monday, October 4th.

Sells-Floto circus, now the second largest in the world, is going to be in Gulfport, Monday, October 4th. for after the big show, a higher performance, and thousands of people in this vicinity who prefer the circus above any other of the tented amusements, will take advantage of this day and visit the big white tops.

The circus this season opened its tour of the country by playing a three weeks engagement in the Galesburg, Chicago, during April to great audiences, and newspapers praised the performances very highly, stating this the greatest performance ever seen in the Windy City. It opens with the Big Production, "The Birth of the Rainbow," in which the greatest circus family is introduced. Following are the great aerial, ground, riding, Indian, wire, animal, clown, dog, pony and monkey acts, and plenty of music. A real circus performance is promised for those fortunate enough to take a day or evening off to see the circus.

The usual brilliant—more brilliant than ever, street parade will be given on the morning of circus day.

NOTICE TO THE PUBLIC.

Hancock County Fair Association Desires of Selling Right Restaurant and Soft Drink Departments.

The management of the Hancock County Fair Association will receive through any of its officers bids or offers for the privilege of keeping the restaurant department and the soft drink and ice cream department for the two days of the fair, to be held October 7th and 8th. The management will consider either a flat rate or commission proposition. Checks and fraternal organizations will be given first consideration.

Chancery Summons.—No. 2372. The State of Mississippi: To Joseph Favre, if alive, and if dead, his unknown heirs at law or legatees and all other persons having or claiming any right, title or interest in and to the following described land, to-wit: That part of the Joseph Favre claim which lies west of Four Dollar Bayou, and a part of Lot 2, Section 30, being part of said lot 2 which lies between the west line of the Joseph Favre claim and Bayou Philip; the south line of which is a continuation of the south line of the said Jos. Favre claim; said land is in Township 8, S. R. 14 West and is known as Justice Point, and contains 126 acres, more or less, all in Hancock County, Mississippi.

You are commanded to appear before the Chancery Court of the County of Hancock, in said State, on the 4th Monday of October, A. D. 1920, to defend the suit in said court of the E. J. Williams Land Company, wherein you are defendant.

This 17th day of Aug. A. D. 1920.

MONEY will GROW

just like corn if you begin BANKING it

THE GREATEST FACTS ARE THE SIMPLEST ONES, TWO AND TWO MAKE FOUR—AND THEY MAKE IT VERY FAST WHEN YOU BEGIN ADDING SOME MONEY EACH PAY DAY TO WHAT YOU ALREADY HAVE IN OUR BANK. TIME GOES RAPIDLY BY AND SOON YOU'LL HAVE A BIG BANK BALANCE.

IF YOU HAVE A BANK BALANCE IN THE MERCHANTS BANK ADD TO IT. IF YOU HAVE NO BANK ACCOUNT WITH US, START ONE. PUT YOUR MONEY IN OUR BANK.

MERCHANTS BANK.

JOSEPH O. MAUFFRAY, FRONT STREET

"Boy, page Methuselah"

THERE is a man, IN OUR town, WHO IS so old, HE'S FORGOTTEN his age, HE WAS elevator boy, IN NEARLY all OF WASHINGTON'S headquarters, HE WAS the first WHO BROUGHT down the house, BY ASKING why, A HEN crossed the road, SO THAT'S how old he is, HE'D JUST lost a job, THAT HE started on IN 1889, HE SAID it he'd known, IT WASN'T permanent, HE'D NEVER have taken it, HE ALSO said,

"IF A ham needs, A WEEK of smoke, TO CURE it, I'M CURED of everything, FOR I been smoking, NIGH ON a century, THE ONLY secret of old age, IS ALWAYS keeping, ABSOLUTELY CONTENTED, AND I gave him one, OF MY cigarettes, AND HE smacked his lips, AND SAID, 'That's it, THEY SATISFY'."

"THEY SATISFY"—that's the solid fact to tie to. And there never was such a cigarette for steady company. Good tobacco, yes—but more than that. Good blending, by a private formula that can't be copied—that's why Chesterfields invariably "satisfy."
